

PROJECT FACT SHEET

Customer: GSK Pharmaceuticals

Project: Switchboards

Project Profile:

Nilsen was contracted to replace two main switchboards and four major distribution boards at the GSK Pharmaceuticals facility in Rydalmere, NSW.

This required a significant amount of planning to ensure that production was not negatively impacted. A series of shutdowns were required to facilitate the demolition of the existing switchroom, and phased introduction of the new boards.

The project was successfully handed over to the client in January 2014.

- **Completion Date:** January 2014
- **Man Hours:** 3 165
- **LTI's:** Zero
