

PROJECT FACT SHEET

Customer:

MCC Mining (Western Australia) Pty Ltd

Project:

Crushing and Concentrator Stockpile Electrical Installation Package

Project Profile:

The Sino Iron project is a large-scale magnetite iron ore processing facility located at Cape Preston, Western Australia (about 100km from Karratha). The project has access to 2 billion tons of iron ore with rights to an additional 4 billion tonnes, making it one of the largest mine sites in the world when it comes into operation, with annual production capacity of 2.76 million tons of concentrate and/or pellet.

The overall project is composed of three functional areas: mining area, crushing and concentration area, and Cape area.

NRPL's contract started with the E&I installation and commissioning assistance work from the Crusher to the stockpile in the Concentrator Area. In Feb 2012, NRPL was further awarded the E&I installation and pre-commissioning package for the Tailings Dam with an estimated duration to March of 2013. However, given the open-ended nature of the contract, the project works are expected to be extended over time.
