

PROJECT FACT SHEET

Customer: Bombardier Transportation

Contractor: Bulk lamp change within active railyard

Project Profile: Brief Project Description:

Bulk lamp change of light poles within rail corridor in Bombardier rail yard.

Outline of Nilsen Scope of Works:

- Arrange access permits for access to rail corridor within service yard
- Arrange access equipment to ensure minimal disruption to customer operations
- Replace lamps and ballasts on all high level light poles within rail corridor
- All works to occur out of hours over multiple weekends.

Specific Project Obstacles to overcome:

- Refine works program around customer to minimize disruption to operations and locomotive movements.
- Refine works program to best utilize boom lifts over multiple weekends thus reducing hire costs
- Adapting project scheduling based on changing customer commitments.

Nilsen Innovation:

- Works were programmed utilizing two boom lifts in close proximity, and one safety observer on the ground, thus reducing labour costs and maintaining efficiency without compromising on safety
- LED proposal being considered for future works, reducing operating costs and carbon footprint for customer.
